Technical Proficiencies & Workflow

- **Philosophy ("Vibe Coding"):** High-velocity development cycle leveraging AI-assisted synthesis to rapidly translate abstract concepts into production-ready code, focusing on architectural integrity and aggressive iteration.
- **Technical Stack:** Luau, TypeScript, Java, C, PostgreSQL; Next.js, Node.js, Vercel, Neon DB, GitHub.
- **AI:** Gemini, NanoBanana, Antigravity, Claude.
- **Game Dev & 3D Tools:** Blender, Roblox Studio, Rojo, Unity.
- **Creative & Content Suite:** Figma, Canva, FL Studio, Video Production, YouTube Analytics & Audience Retention Strategies.
- **Languages (Spoken):** Indonesian (Native Fluent), English (Fluent).

Software & Game Development

UGCLeaks | *Full-Stack Web Hub*

Dec 2025 – Present

- Developed a full-stack Next.js and PostgreSQL hub for tracking virtual asset schedules, drawing 4,000+ unique visitors and 9,400+ page views in its first 30 days.
- Engineered an API bridge connecting Roblox Marketplace with Neon DB for real-time, timezone-accurate updates.
- Scaled organic reach to sustain approximately 9,500 monthly page views (15/05/2026) from a diverse global demographic (US 24%, ID 15%).
- Enhanced user retention by designing custom CSS themes and interactive UI playground tools.

CLUTTER (Under Development) | *Physics-Based Growth Simulator*

July 2025 – Present

- Architected a custom physics system in Luau where player's mass scales dynamically based on consumed object volumes.
- Streamlined the 3D asset pipeline using Blender; created low-poly 3D assets and a single-texture atlas technique to reduce overall memory consumption.
- Integrated Rojo for external IDE code editing and strict Git version control to ensure scalable game logic.

Die.io | *2D Multiplayer Experience*

Nov 2025 – Dec 2025

- Led a 4-person team to develop a 2D multiplayer game environment using the Java-based libGDX framework.
- Implemented object pooling for high-frequency entity spawning, maintaining a stable 60 FPS on mid-range hardware.
- Designed the core game loop, custom rendering pipelines, and integrated a local leaderboard backend system.

Content Creation & Multidisciplinary Engineering

Video Production (YouTube)

2020 – Present

- Manage a rhythm-game editing and audio mashup channel, amassing 1.23M+ lifetime views and 2,100+ subscribers over the course of 5 years.
- Utilize FL Studio (Soundfont & Slicer plug-ins, chromatic scales) for beginner sound design, instrument replication, and song deconstruction.
- Generate strong audience engagement (16.3K views / 374 hours of watch time in a recent 28-day period; 15/05/2026) from the past 30 days of retention.

Digital Graphic Design

January 2026

- Execute visual graphic design composition using Figma and Canva, producing a memory album with a Daycare, Nature, and Seaside theming.
